COLOURED CATEGORY 5 PATCH CABLES WITH MOLDED BOOTS

*High-performance. Colour-coded.
No kinks or pinches.
These cables are ready for
all your device-to-device runs
up to 100 Mbps.*

Key Features

- ▶ **Reduce crosstalk caused by kinked cables.**
- ▶ **Different colours make it easy to distinguish between different applications and installations.**
- ▶ **Category 5 is the only type of twisted-pair cable recommended for 100BASE-TX networks.**
- ▶ **Stranded 24-AWG wire for maximum flexibility.**
- ▶ **ETL verified to TIA 568 TSB 40A specs.**
- ▶ **UL[®] listed, CSA approved.**
- ▶ **Guaranteed for life!**

The molded boots on these Coloured Category 5 Patch Cables keep your network up to speed and your data safe by preventing cable kinks and bent pins—two common problems that contribute to increased crosstalk.

The different colours enable you to easily differentiate the mass of patch cables that are used in your patching centres and wiring closets. Choose from seven colours (blue, green, red, yellow, pink, black, and beige) and ten cable lengths (1, 3, 6, 10, 15, 20, 25, 30, 50, and 100 feet).

Use these patch cables to connect your workstation NICs (network interface cards) to the wallplate, patch panels, and other equipment such as hubs.

Made from stranded conductors, patch cable is excellent for applications that call for repeated flexing—without damaging the cable or data transmission. They are excellent for connecting computers to the wallplate. Users can plug, unplug,

and move their computer stations without worrying about damaging the cable. Its PVC jacket includes resins that give it toughness and plasticisers to provide flexibility.

These cables are ideal for 4- or 16-Mbps Token Ring, and 10BASE-T or 100BASE-TX

Ethernet networks. Category 5 cable is the minimum recommended for all new installations. Since network upgrades will most certainly go to higher speeds, using Category 5 now will help you avoid recabling in the future.

Specifications

Cable Construction — PVC
Cable Type — 4-pair stranded UTP
Conductor Gauge — 24 AWG (7 x 32)
Conductor Material — Stranded copper
Diameter — 0.205" (0.520 cm)
Frequency — Up to 100 MHz
Hood Assembly — Plastic RJ-45 with boot

Impedance — 100 ± 15 ohms
Jacket — PVC
Mutual Capacitance — 15 pF/ft.
Number of Conductors — 8 (four pairs)
Resistance — 45 ohms/1000 ft.
Standards — EIA/TIA TSB 40-A Category 5
Wiring Type — 568B
Connectors — RJ-45

How the cables are pinned and paired:

Pinouts

Straight-through pinning

Pairing

RG568B Pairing

Standard 4-Pair Wiring Color Codes

Pair 1	T	White/Blue	Pair 3	T	White/Green
	R	Blue/White		R	Green/White
Pair 2	T	White/Orange	Pair 4	T	White/Brown
	R	Orange/White		R	Brown/White

NOTE: For 6-wire jacks use pair 1, 2, and 3 colour codes. For 4-wire jacks use pair 1 and 2 colour codes.
