Horizontal and Vertical Organizers

Manage and maintain your Category 5 cabling.

Technically Speaking

JPM700A–JPM704A

It's easy to keep your connections straight with Combination Organizers. Mounted between Category 5 Modular Jack Panels, they route patch cords to jacks in front, and cables to 110 clips in back. No need for cable ties, which can be cinched too tightly and hinder performance. The organizers allow plenty of room for four-pair Category 5 cable and keep the cable jacket intact until reaching the 110 clips.

Additional features include:

- One device for front-side and back-side horizontal

cable management.

- Maintains twists and allows the cable jacket to remain intact up to the termination.
- Eliminates cable stress.
- Assures compliance with minimum bend radius requirements.
- No need for cable ties, which can be cinched too tightly and hinder performance.
- Sturdy steel construction.

JPM705A, JPM706A

The Vertical Organizers route patch cords and cable vertically between Relay Racks. Rings in front organize patch cords; a U-shaped

channel in back permits orderly cable routing.

Use the JPM075A with a 6-inch width between fully loaded

racks; use the JPM706A with a 3-inch width with a single rack, at the end of a lineup, or between partially loaded racks.
