SOUNDSTATION

The SoundStation conference phone: Your ticket to better business communications.

Key Features

▶ *Full-duplex system eliminates echoes, clipped words, and reverberations for more natural two-way conversation.*

▶ *Keypad operates just like a regular handset phone.*

▶ *Superior sound quality for small- to medium-size rooms.*

▶ *Digitally-tuned speaker provides full 360° room coverage, so you can move around while speaking.*

Clear, crisp voice transmission is yours with the SoundStation conference phone.

With conventional half-duplex speakerphones, only one person can speak at a time without clipping off the other person's voice. Echoes and howling can further disrupt your conversations and lead to costly misunderstandings.

SoundStation's breakthrough, full-duplex Acoustic Clarity Technology™ lets you engage in natural, free-flowing discussions. You don't have to shout to be heard or strain to hear what others are saying. Conference calls are not only more productive, but also much more enjoyable.

Three microphones and a powerful, digitally tuned speaker provide full 360° coverage, whether you're using the phone in a conference room or your office. The built-in keypad looks and works like a touch-tone telephone's, offering such handy features as a mute button and flash key. There's even a jack to plug in a tape recorder.

What's more, the SoundStation is as easy to install as it is to use. A single cord connects the compact console unit to a wall module or universal module that contains both power and telephone interfaces. And SoundStation is configured at the factory to meet your country's telephone network specifications.

Both the SoundStation EX (expandable) (2200-01423-001) and the Sound Station EX (with two external microphones) (2200-00696-001) ship with three microphones and a speaker.

For large room coverage, the SoundStation EX (2200-00696-001) also ships with two external microphones. Simply place these low-profile extras on either side of the console unit to more than double the coverage of standard conference phones.

Metal or soft carrying cases are also available (ordered separately).

Why Buy From Black Box? Exceptional Value. Exceptional Tech Support. Period.

Recognize any of these situations?

- You wait more than 30 minutes to get through to a vendor's tech support.
- The so-called "tech" can't help you or gives you the wrong answer.
- You don't have a purchase order number and the tech refuses to help you.
- It's 9 p. m. and you need help, but your vendor's tech support line is closed.

According to a recent survey by Data Communications magazine, 90% of network managers surveyed say that getting the technical support they need is extremely important when choosing a vendor. But even though network managers pay anywhere from 10 to 20% of their overall purchase price for a basic service and support contract, the technical support and service they receive falls far short of their expectations—and certainly isn't worth what they paid.

At Black Box, we guarantee the best value and the best support. You can even consult our Technical Support Experts before you buy if you need help selecting just the right component for your application.

Don't waste time and money—call Black Box today.

Specifications
